

Basic Fitting Information

The Fittings - hose end and parts section is divided into 5 sections - by fitting types:

- 1. AEROQUIP EZ-CLIP** - Fittings can be used to quickly repair a leaking refrigerant line.
- 2. BARBED END** - Fittings used generally on older vehicles equipped with R12 only and usually used with a worm gear hose clamp or faced crimp ferrules.
- 3. BEADLOCK** - Fittings used on vehicles using R12 or R134a - available in aluminum or steel uses nylon barrier hose which the couplings must be crimped.
- 4. BURGACLIP** - Hose and fitting combo provides 74% less permeation rate.
- 5. REDUCED DIAMETER** - Fittings used for its ease of routing and lighter weight is found on many later models and must be used with only Reduced Diameter Nylon Barrier Hose.

Fitting Identification

Steps In Fitting Identification:

*Determine the fitting type - male o-ring, female o-ring, male insert o-ring, male flare, or female flare using the illustrations on the following pages.

*Match the fitting with the illustrations to determine fitting size. The fitting dimension is determined by measuring the O.D. of the tubing directly behind the nut. This is a nominal (approximate) dimension.

*Determine the hose end size of the fitting by measuring the O.D. tubing inserted into the hose. This will be the same as the hose I.D.

Example: $\frac{5}{16}$ " O.D. fitting end uses No.6 - $\frac{5}{16}$ " I.D. hose.

*The fitting may be regular, step-up, or step-down type.

-It is a regular fitting if the hose end size is the same as the fitting size. Example: No. 6 fitting and No. 6 hose end size.

-It is a step-up fitting if the hose end size is larger than the fitting size. Example: No. 6 fitting and No. 8 hose end size.

-It is a step-down fitting if the hose end size is smaller than the fitting size. Example: No. 8 fitting and No. 6 hose end size.

*Determine the angle of the fitting - 90° , 45° or straight.

*Determine if the fitting is Barb, Beadlock or Reduced Diameter Beadlock type.

To determine the hose size that a specific fitting is designed to fit, measure the outside diameter of the insert as shown.

Hose Size	Fitting Size	Thread Size	Hose I.D.
#6	$\frac{3}{8}$ "	$\frac{5}{8}$ "	$\frac{5}{16}$ "
#8	$\frac{1}{2}$ "	$\frac{3}{4}$ "	$\frac{13}{32}$ "
#10	$\frac{5}{8}$ "	$\frac{7}{8}$ "	$\frac{1}{2}$ "
#12	$\frac{3}{4}$ "	$\frac{5}{8}$ "	1 $\frac{1}{16}$ "

Environmental concerns have dictated more stringent standards (S.A.E. J2064) for the coupling of automotive air conditioning hoses; especially on systems using R134a refrigerant, which tends to permeate more readily than R12 refrigerant. The following information is provided to give an overview of generally acceptable hose, fitting and tube coupling as used in the automotive air conditioning industry.

BARB FITTING
SHOWN WITH "FACE CRIMP"

BARB Fittings: Traditionally used on automotive air conditioning aftermarket systems and replacement parts in conjunction with many different crimp styles including hose clamps, "face crimps", and "bubble crimps."

BEADLOCK FITTING
SHOWN WITH "BUBBLE CRIMP"

Recommendations: Whenever possible, meet S.A.E. J2064 standards for hose crimping. **For R12** systems use a BARB or a BEADLOCK fitting with barrier hose in conjunction with either a "face crimp" or a "bubble crimp." **For R134a** systems use a BEADLOCK fitting with barrier hose and a "bubble crimp." The use of hose clamps for refrigerant connections is not recommended.

BEADLOCK Fittings: Used primarily on later original equipment applications, aftermarket system installations, and in conjunction with replacement parts.

FITTINGS — BURGACLIP

BURGACLIP FITTINGS

- Save Time

- Eliminate Leaks

- New, Simple, Fast and Easy

- Use with Reduced Diameter Hose

- Burgaclips' state-of-the-art hose fittings are a breakthrough in the a/c industry.
- A simple procedure to attach fittings to the hose.
- This hose and fitting combo provides a permeation rate, which is 74% less than the presently available hose assemblies in the marketplace.

All BURGACLIP fittings are supplied with clip holder and clips.

How To Install Instructions

1. Cut hose to proper length.
2. Place two proper size clips into the clip holder. For ease of assembly, both clips should have the same orientation.
3. Slip in the clipholder with the clips. Place the clipholder with the two clips on the hose. In such a manner that the side with the smallest hole touches the end of the hose.
4. Lubricate the fitting with a generous amount of the a/c systems lubricator oil (this lowers the force of insertion)
5. Insert the Burgaclip fitting into the hose. Ensure that the fitting is fully inserted by checking the gap between the end of the hose and the shoulder of the fitting.
6. Close the clips with the Burgaflex clip pliers (#8758BC). The pliers open themselves when the correct amount of force has been reached. Start with the clip closest to the end of the hose. DONE !

E-Z CLIP Assembly Instructions

Step 1. Cut the Hose

Cut the hose to proper length with an appropriate tool. The hand-held hose cutter has been specially designed for cutting all non-wire reinforced hose, such as GH134 multi-refrigerant hose. Be sure the cut is made square to the hose length.

Step 2. Slip on Two Clips

Install two proper-sized clips onto the cut end of the hose. Orientation of the clips does not affect the performance of the connection. However, for ease of assembly, both clips should have the same orientation.

NOTE: Failure to slide the clips over the hose at this time will require the clips to be stretched over the hose or fitting later. This may permanently damage the clip.

Step 3. Oil the Nipple

Lubricate the nipple with a generous amount of the refrigeration or A/C system's compressor lubricating oil. This **MUST** be done to lower the force of the nipple insertion.

Step 4. Insert the Nipple into the Hose

Insert the nipple into the hose. To ensure that the nipple is fully inserted, check the gap between the cut end of the hose and the shoulder on the nipple. Care should be taken to avoid kinking or other damage to the hose during nipple insertion.

NOTE: Be sure to wipe excess oil from the nipple and hose.

Step 5. Snap on the Cage

Snap the cage into the groove on the nipple. The arms should extend over the hose length. When the cage has been correctly installed in the cage groove, the cage will be able to rotate in the groove. This step **MUST** be performed to ensure:

1. The clips will be located over the O'rings on the nipple.
2. The connection will be compatible with the connection's pressure rating.

Step 6. Slide the Clips

Slide the clips over the cage arms and into the channels on each arm.

Step 7. Close the Clips

Use the 8760EZ pliers to close the clips. The pliers should be positioned squarely on the clip connection points and should remain square during the closing of the clip.

Nose of the pliers should be firmly seated under the assembly bump and lock latch.

Note: -16 only, tap the top latch until fully seated.

If the pliers are not kept square during closing of the clip, the clasp may have an offset. Use the pliers to correct the clasp alignment.

FITTINGS — AEROQUIP E-Z CLIP

NOTE: Fittings are supplied with E-Z Clips and Attachment Cage.

E-Z Clip Fittings work exclusively with Aeroquip GH134 Series Refrigerant Hose Only
